POSITIONS	Summer 2018 - ongoing: Assistant Professor, Boston University Questrom School of Business Fall 2018 - Research Affiliate, MIT Initiative on the Digital Economy. 2015 - 2018: Postdoctoral Associate, MIT Sloan School of Management 2012 - 2016: Part-time Data Scientist, Airbnb Inc. 2014 - 2015: Postdoctoral Fellow, National Bureau of Economic Research	
EDUCATION	Stanford University, Stanford, California Ph.D. in Economics	September, 2008 - June, 2014
	Duke University, Durham, North Carolina B.S. with High Distinction in Economics and Mathematics w/ minor in Political Science	August, 2004 - May, 2008
RESEARCH FIELDS	Industrial Organization, Economics of Digitization, Quantitative Marketing, Labor Economics	
PUBLICATIONS	<p>The Welfare Economics of Default Options in 401(k) Plans (with Douglas Bernheim and Igor Popov) <i>American Economic Review</i>, September 2015 Default contribution rates for 401(k) pension plans powerfully influence workers' choices. Potential causes include opt-out costs, procrastination, inattention, and psychological anchoring. We examine the welfare implications of defaults under each of these theories. We show how the optimal default, the magnitude of the welfare effects, and the degree of normative ambiguity depend on the behavioral model, the scope of the choice domain deemed welfare-relevant, the use of penalties for passive choice, and other 401(k) plan features. Depending on which theory and welfare perspective one adopts, virtually any default contribution rate may be optimal. Still, our analysis provides reasonably robust justifications for setting the default either at the highest contribution rate matched by the employer or – contrary to common wisdom – at zero. We also identify the types of empirical evidence needed to determine which case is applicable.</p> <p>The Impact of Unemployment Insurance on Job Search: Evidence from Google Search Data (with Scott R. Baker) <i>The Review of Economics and Statistics</i>, December 2017 Job search is a key choice variable in theories of labor markets but is difficult to measure directly. We develop a job search activity index based on Google search data, the Google Job Search Index (GJSI). We validate the GJSI with both survey- and web-based measures of job search. Unlike those measures, the GJSI is high-frequency, geographically precise, and available in real time. We demonstrate the GJSI's utility by using it to study the effects of unemployment insurance (UI) policy changes between 2008 and 2014. We find no evidence of an economically meaningful effect of these changes on aggregate search.</p> <p>Blame the Parents? How Parental Unemployment Affects Labor Supply and Job Quality for Young Adults (with Frederic Panier and Ilan Tojerow) <i>Journal of Labor Economics</i>, <i>Journal of Labor Economics</i>, Volume 37, Issue 1, 2019. We study the role of shocks to parental income in determining the labor market outcomes of children entering the labor market. We find that a child whose parent loses a job prior to the child's labor market entry is, on average, induced to work 9 percent more in the 3 years following labor market entry than a child whose parents lose a job after the child's entry. This effect is concentrated on</p>	

the extensive margin and decreases in magnitude over time. We find no evidence that these shocks affect the quality of the job that entrants find.

WORKING PAPERS **The Welfare Effects of Peer Entry in the Accommodations Market: The Case of Airbnb**
(with Chiara Farronato)

Revise & Resubmit at the American Economic Review

We study the effects of enabling peer supply through Airbnb in the accommodation industry. We present a model of competition between flexible and dedicated sellers - peer hosts and hotels - who provide differentiated products. We estimate this model using data from major US cities and quantify the welfare effects of Airbnb on travelers, hosts, and hotels. The welfare gains are concentrated in locations (New York) and times (New Years Eve) when hotels are capacity constrained. This occurs because peer hosts are responsive to market conditions, expand supply as hotels fill up, and keep hotel prices down as a result.

The Determinants of Online Review Informativeness: Evidence from Field Experiments on Airbnb (with Elena Grewal, David Holtz, and Matthew Pearson)

Revise & Resubmit at Marketing Science

An earlier version appeared as an abstract at ACM EC'15

Reputation systems are used by most digital marketplaces, but their design varies greatly. We use two experimental changes to reviews on Airbnb to study how design choices affect the extent to which ratings and reviews aggregate information. The first change offered guests a \$25 coupon in exchange for submitting a review. The second change implemented a simultaneous reveal review system, which eliminated strategic considerations from reviews. We show how both experiments made the reputation system more informative and use our findings to quantify the relative importance of mechanisms that cause inefficiency in reputation systems.

Search, Matching, and the Role of Digital Marketplace Design in Enabling Trade: Evidence from Airbnb

(This paper is a major revision of the first part of my thesis: "Search Frictions and the Design of Online Marketplaces.")

Digital peer-to-peer marketplaces have increased trade in underutilized assets. I use the setting of Airbnb to investigate transaction costs in peer-to-peer markets and the role of search engine design in reducing these costs. I show that search is limited, directed, and often results in the rejection of searchers by hosts due to uncertain seller availability. I document the reasons for these rejections and show that rejections cause searchers to leave the market. I then simulate outcomes with alternative consideration sets and find that, without availability tracking by the search engine, the share of rejected contacts would more than double.

A Simulation Approach to Designing Digital Matching Platforms

(This paper is a major revision of the second part of my thesis: "Search Frictions and the Design of Online Marketplaces.")

Digital matching marketplaces are characterized by user heterogeneity, limited capacity, and dynamic market clearing. These features create spillovers between users. For example, an Airbnb listing booked by one guest cannot be booked by another guest for the same night. Spillovers limit the applicability of many experimental and observational methods for evaluating the effects of marketplace policies. In this paper, I show how to use marketplace simulations as an input into the design of user acquisition strategies and ranking algorithms. I calibrate a marketplace simulation using data on searches and transactions from Airbnb and use it to address three topics: the returns to scale in matching, the heterogeneity in returns to user acquisition, and the size of bias in experimental designs. I find that Alexander Teytelboym's returns to scale are initially increasing due to market thickness effects and then decreasing due to availability frictions in search. Furthermore, heterogeneity in the value of listings to the platform is large — the effect of acquiring 25% more listings on bookings varies between -4.1% and 5.4% depending on the quartile of listing quality. I then measure the extent of bias in experimental treatment effects due to spillovers. The treatment

effect of a better ranking algorithm on conversion rates is overstated by 53% when a quarter of users are randomized into treatment.

Consumer Protection in an Online World: When Does Occupational Licensing Matter?

(with Chiara Farronato, Brad Larsen, and Erik Brynjolfsson)

This paper studies the effects of occupational licensing on outcomes in a large on-line platform for home services, where professional service providers bid on consumers projects. We exploit exogenous variation in the time at which licenses are displayed on the platform to identify the causal effects of licensing information and reviews on consumer choices. We find that platform verified licensing status is not valued by consumers but digital reputation is. Next, we use zip-code by job category variation in licensing stringency to measure the effects of licensing on aggregate market outcomes. Our results show that more stringent licensing leads to less competition and higher prices, but does not improve customer satisfaction.

Dog Eat Dog: Measuring Returns to Scale using a Digital Platform Merger

Successful digital marketplaces can make existing markets more efficient and can create entirely new markets. It is common wisdom that many of the gains from digital marketplaces are difficult to achieve until they acquire scale. However, the mechanisms behind these efficiencies have never been quantified. We propose to use Rover.com's acquisition of DogVacay to study the returns to scale and benefits from integration in platform industries. The combination of the two marketplaces offers a unique opportunity to study this question because it is one of the few cases where the scale of a marketplace changes in a sudden and exogenous way, not caused by incremental adoption.

COMPUTER AND
COMPUTATIONAL
SOCIAL SCIENCE
CONFERENCE
PRESENTATIONS:

Search, Matching, and the Role of Digital Marketplace Design in Enabling Trade, The Second International Conference on Computational Social Science (IC2S2'16)

Search Frictions and the Design of Online Marketplaces, The Third Conference on Auctions, Market Mechanisms, and Their Applications (AMMA'15)

Bias and Reciprocity in Online Reviews: Evidence from Field Experiments on Airbnb. The Sixteenth ACM Conference on Economics and Computation (EC'15).

Economic Frontiers Podcast (2016 - 2017) - Economic Frontiers is a podcast about the frontier of economics research regarding technology, innovation, and digitization. Each episode brings in a leading researcher or research team for a discussion of their work and its broader implications.
MIT On-Demand Economy Workshop and Conference (2016) - Co-organized conference bringing together academics, technology leaders, and policy makers to discuss how technology is changing matching in the labor market.

SCHOLARSHIPS, HONORS AND AWARDS

Scholarships: NET Institute Fellowship, Shultz Fellowship Award, George P. Shultz Scholar, Haley-Shaw Fellowship Scholar
 Awards: Allen Starling Johnson, Jr. Best Undergraduate Thesis in Economics Prize

TEACHING EXPERIENCE

2018: Measuring Impact with Causal Methods (MBA, Undergrad)
 2018: Mathematical Modeling and Marketing (Ph.D.) (joint with Professors Johnson, Srinivasan, and Sun.)
 2015 - 2018: Guest lectures: Ph.D. Market Design (Harvard), MBA Marketing Analytics (MIT Sloan, Boston U. Questrom School of Business), MBA Information Economics (MIT Sloan)
 2011 - 2012: TA: Advanced Topics in Econometrics (Prof. DeGiorgi), Introduction to Econometrics (Prof. Harding and Prof. Mahajan), Market Design (Prof. Levin).
 2007 - 2008: TA: Intermediate Microeconomics (Prof. Yildirim and Prof. Taylor), Financial Markets and Investment (Prof. Eraker), Junior Honors Thesis Seminar (Prof. Tauchen and Prof. Bollerslev).

DATA SCIENCE / OTHER

A National Survey of the Peer-to-Peer Economy (with Chiara Farronato and Rover.com)
 Designed a quarterly national survey to measure the current and expected size of the peer-to-peer economy. The survey also quantifies the importance of barriers to the consumption of peer-to-peer services in the labor, hospitality, transportation, and pets markets.
Ranking Algorithm Design:
 Co-designed a proprietary algorithm that uses discrete choice models to rank the listings displayed to Airbnb searchers.
Search Experimentation Framework:
 Co-designed a system that tracks the actions of searchers and evaluates search experiments.
Operations Experiments:
 Designed experiments to evaluate the effectiveness of customer support and platform pricing.
Consulting:
 Advised on the design of Airbnb's reputation system, pricing recommendations, marketing strategy,

and academic collaboration policy.

Media:

Co-created the Airbnb Hospitality Index and the Airbnb Global Citizenship Index. This work was covered in Le Monde, El Pais, the Telegraph, and other media outlets.
